# ERSTA ROLL-UP SIDE CURTAINS ERSTA

**Roll up sides have many benefits. They are a highly effective, low cost way of ventilating your stable. Roll up sides are an energy efficient, passive solution to keeping your stable cool.**

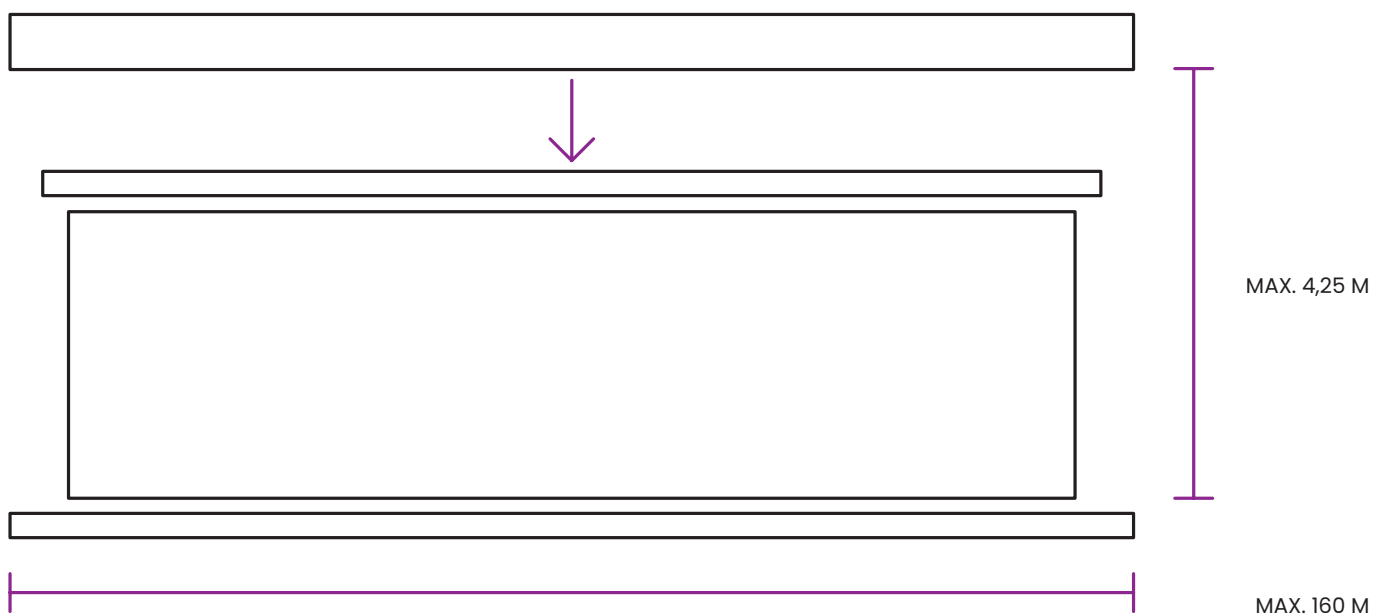

The opening height is up to 425 cm, and the curtains can be opened automatically (by electricity) or manually (by crank).

They are made of a woven PVC fabric with customisable colour, fabric weight and light transmittance. The material makes the curtains easy to weld.

## HEAT-INDUCED STRESS

Instead of ruminating, the cows become sluggish, eat less, and start panting in order to release their body heat. **When the temperature rises from 20°C to 30°C, cows will take in at least 1.5 kg less dry substance and produce 3 – 5 kg less milk a day.**
